

FILTER COFFEE MACHINE

convenient and smart
For coffee with perfect aroma!

ROMMELSBACHER

"Freshly brewed coffee tastes best!" - That is one of many reasons why filter coffee machines are so popular. Our FKM 1000 filter coffee machine will impress in any kitchen with its timeless linear design. It brews up to 12 cups of aromatic coffee into the high-quality glass jug in one go. The FKM 1000 shines with its easy-to-use operating concept, which provides a great deal of convenience. One touch is all it takes for the touch control sensors to do their job; the large LED display provides the best overview. The integrated clock can be used to pre-programme the start time, which is perfect for an aromatic start into the day. Once the coffee is ready, the drip stop ensures clean surfaces, and the automatic keep-warm function keeps the coffee at the right temperature. Those who want to give their coffee an extra aroma kick can use the special aroma function. A particularly practical feature is that the water tank can be removed for filling. A cleaning and descaling programme has also been thought of. The FKM 1000 is part of the attractive *Sunny* breakfast series, which, in addition to this appealing filter coffee machine, also includes a toaster and a turbo-fast water kettle.

Breakfast series: water kettle,
filter coffee machine, toaster
