

INDUCTION COOKING PLATE rapid and energy-saving!

90% efficiency - cooking more effectively

60 % quicker - gaining time

50 % energy saving - environment-friendly

The quickest and most efficient way of cooking! Thanks to 90% efficiency and 50% energy conservation you will experience a new dimension of cooking. The concept behind induction technology is the electromagnetic principle according to which ferrous materials are automatically recognised and heated. As a result, this novel technology does not heat the cooking surface but the pot bottom directly, which is also why it is especially safe and easy to clean. Its operation is based on electronic programme buttons. You may opt for 10 temperature settings or the supplied power, also provided in 10 settings. The ease of use is optimised by a cooking time pre-selection of up to 180 minutes, with automatic switch-off and audible signal, not to forget the features of overheating protection, residual-heat and power-on indication.

Technical Specifications:

- Type: ELTAC IN 20
- 230 V ~ 2000 W
- high-quality plastic casing
- electronic regulation via programme buttons
- temperature selection in 10 settings
- power selection in 10 settings
- cooking time pre-selection up to 180 minutes
- with automatic switch-off and audible signal
- overheating protection
- residual heat indication and power-on display
- dimensions: 35 x 30 x 6 cm
- EAN: 40 01797 750006
