

ELECTRIC FONDUE SET

Stylish, superior and safe

ROMMELSBACHER

A superior fondue set in extraordinary design and with first class equipment - perfectly suited for safe fondue delight in conviviality. This fondue set has a double-walled, heat-insulated casing and is efficiently heated by electric power, i.e. 350 W. Thus, neither open flames nor fuel smell affect your fondue experience. The electric heater can be adjusted indefinitely variably. Therefore, the temperature is flexibly adjustable for all kinds of fondue (no matter if oil, bouillon, chocolate or cheese). The removable fondue pot is safe and well insulated inside the casing. Thanks to the superior ceramic coating it is also quite easy to clean. The anti-splash insert made of stainless steel serves also for fork fixing. The forks themselves are easily recognisable thanks to their coloured tags. The glass lid for quick heating and the extra-long power cord are further advantages which will make the new ROMMELSBACHER fondue set a welcome guest at all convivial tables.

Technical data:

- Type: F 350
- 230 V ~ • 350 W
- double-walled Cool Touch casing, heat-insulated
