

CHAFING DISH HEATER

Safe - convenient – up-to-date

ROMMELSBACHER

This heater is a safe and convenient heating device for all common chafing dish models. With this electric chafing dish heater - made by ROMMELSBACHER Germany - there is no more need for any dangerous and time-consuming refilling of liquid fuel during operation. There is also no risk of fire, because open flames are no longer necessary. Even any unpleasant odour development is a thing of the past. The heating plate is pressed against the underside of the food container by means of the spiral spring, thus you can take all advantages of a direct heating but without any loss of heat.

Technical data:

- type: RK 500.2 CD
- 230 V ~ 500 W
- housing made of polished stainless steel
- high quality original cast-iron heating plate, heating zone Ø 80 mm
- with overheat protection
- dimensions:
 - Ø heater 13 cm
 - max. height: 12 cm
