

# HOT AIR FRYER XXL

*versatile, efficient and big*  
Healthier frying, roasting, baking!

Healthier frying with hot air! A spacious capacity, the practical inspection window and the interior light that can be switched off, are special features that catch the eye right from the start with the attractive FRH 1700 hot air fryer. However, this contemporary, quiet, and energy-efficient appliance convinces with a variety of other practical functions. Thanks to the innovative Hot Air Convection technology, the baking chamber quickly reaches temperature, and the heat is evenly distributed. The hot air ensures dishes that are crispy on the outside and juicy on the inside. For example, up to 1 kg of fries can be fried evenly and with low fat in one go. This hot air fryer is also perfect for baking cakes as well as grilling & frying finger food and snacks, especially when it comes to quantities for the whole family. During preparation, you have a good view of everything thanks to the illuminated inspection window. 10 programmes, temperature selection up to 200 °C, timer - the operation is pleasantly simple, a light touch of the sensors is enough. The handling of the appliance is reassuringly safe; this is ensured by the heat-insulated casing, the overheating protection and much more. The use of high-quality materials and coatings also makes cleaning 'afterwards' very easy. The FRH 1700 is the perfect choice for discerning households appreciating healthy, low-fat, and quick meals.

Ranking 'very good' in a  
German consumer test

## Technical data:

- type: FRH 1700
- 220-240 V ~ 1700 W • black/stainless steel
- **compact** rectangular design for optimal filling, high-quality materials, with stainless steel application
